X for Exception Designation

- Kim Helliwell, “IBIS Quality Committee Report”
<http://www.eda.org/pub/ibis/summits/feb07/helliwell.pdf>
- Real exceptions exist
- “X” means exception is noted (DOCUMENTED)
- Real examples
 - I-V Glitch
 - I-V tables not crossing 0 V, 0 A
 - DDRII (BUG93) – Error in ibischk4 parser
- Still discussing best approaches

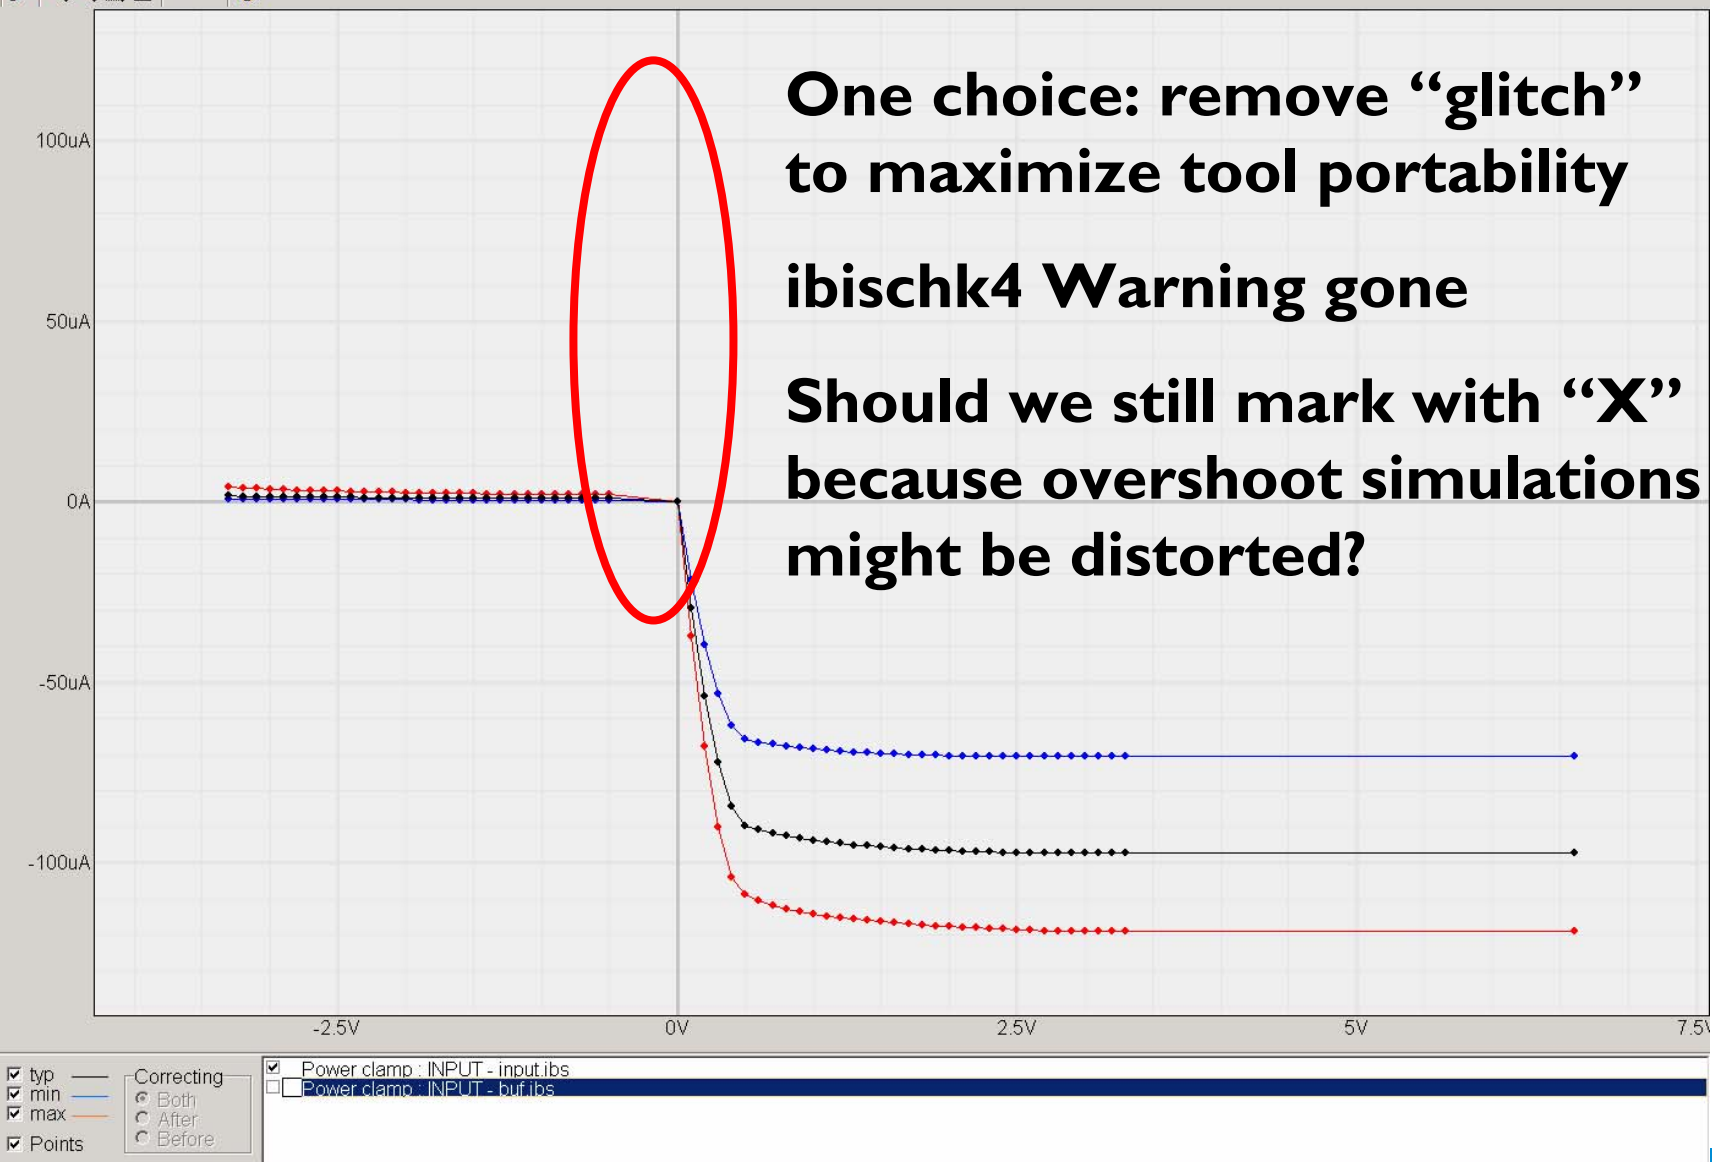

☒ typ
☒ min
☒ max
☒ Points

Correcting
☒ Both
☐ After
☐ Before

☒ Power clamp : INPUT - input.ibs
☒ Power clamp : INPUT - buf.ibs

CML Stearing Logic [Pulldown] Tables Produce Quality Document Exception

- Top-level
 - ODT [Power Clamp]
 - MAIN [Pulldown]
 - [Driver Schedule]
- MAIN [Pulldown]
 - Scaled waveforms
- BOOST [Pulldown]
 - Scaled waveforms

4.3.10 {LEVEL 3} [Pulldown] I-V

tables pass through zero/zero
Typ, Min, and Max Pulldown table
currents should all pass through zero at
zero volts from ground (cmos). These
three pull down tables should pass
through zero/zero except in special cases
(i.e. Differential, PECL, LVDS, or SERDES
driver).

**0 ibischk4 Warnings, but should exceptions
be documented with “X”?**

Or should this be left without comment?

(Could become a future Caution check)

Parser Error for DDRII Models

```
[Model Selector]      DDRII_DIFFCLKIO_BI
|
DDRII_DIFFCLKIO_75    75 Ohm On Die Termination | Default
DDRII_DIFFCLKIO_150   150 Ohm On Die Termination
DDRII_DIFFCLKIO_NO     No On Die Termination
```

```
[Model]  DDRII_DIFFCLKIO_75
```

```
[Receiver Thresholds]
```

```
|
Vth = 0.90V
```

```
Vth_min = 0.882V
```

```
Vth_max = 0.918V
```

```
Threshold_sensitivity = 0.50
```

```
Reference_supply Power_clamp_ref
```

```
Vinh_ac = +250mV
```

```
Vinh_dc = +50mV
```

```
Vinl_ac = -250mV
```

```
Vinl_dc = -50mV
```

```
Tslew_ac = 300ps | Based on JEDEC STANDARD JESD8-15A
```

```
| Differential parameters (generates Warning message when added)
```

```
| Vdiff_ac = +500mV
```

```
| Vdiff_dc = +100mV
```

Bad Warning for differential specifications with [Diff Pin], [Receiver Thresholds], and [Model Selector] (for setting on-die terminator) – BUG93

Comment the model?

**TERASPEED
CONSULTING
GROUP**

X Dilemma – Parser Gives Wrong Warning/Error

- Correct model with Warning/Error NOW, but in future, no Error or Warning (E.g., BUG93)
- Correct model and “X”
 - Yes for covering lag in EDA tool parser update
 - No because model is correct even though ibischk4 flags problem today (but then user is confused)
- Comment model parameters and “X”
 - Yes to document modification and suggest future change
 - No, should not depend on user changes
- Under discussion

X Closure

- Several types of exception cases shown
- Vendors might handle cases differently
 - Real characterization with “X”
 - Modify model with or without “X”
 - Several models covering several cases
 - Ignore
- Main point is that “X” means the exceptions are known, and some resolutions might be suggested
