Parser Classifications

–numbered to get message no.

- E – Error (violation of a specification rule or serious modeling convention violation)
- W – Warning (out of range data or other unexpected model data)
- C – Caution (requires caution flag, legal but probably wrong entry)
- N – Note (so far, used for non-monotonic tables)
- B – Program Bug (an Internal Error that may be related to operating system, memory allocation or ambiguous code branches)
- U – Unused (message that is no longer available)

Ongoing Project by Iteration

- Process used to correct source spread sheet
- Comments expanded (for example, the percent thresholds for Errors and Warnings for V-T matching)
- Some related messages will be described (such as different non-monotonic messages)
- Some messages will remain incomplete or TBD
- Indexing of message numbers to message section and pages planned

Ibischk5 V5.1.3 release (6 Bugs)

- Released March, 2013 (source code and several executables)
- Mostly trivial Bugs based on feedback from developers using parser source code
- BUG140 dealt with changing non-monotonic Warning to Note shown later
- BUG144 dealt with an Internal Error (B) message moved to an Error (E) message (B0122 moved to E0174)

- Presented at IBIS Quality Committee November 27, 2012
- BUG140: <http://www.eda.org/ibis/bugs/ibischk/bug140.txt>
- (In all test cases, the [Gnd Clamp] data is 0.0 in the region of interest)

BUG 40 Issue

- Unexpected Non-Monotonic Warnings for Combined I-V Tables (derived from monotonic data)

- Combined I-V table checks:
 - [Pulldown] + [Gnd Clamp] + [Power Clamp]
 - [Pullup] + [Gnd Clamp] + [Power Clamp]

- Ibischk5 parser is de facto standard for IBIS model correctness (and ibischk5 is embedded in tools)
- Some companies require 0 Errors, 0 Warnings
- IBIS Quality Spec, recommends 0 Errors and 0 Warnings
- Warning messages create support issue for model authors or automatic modeling utility**

**TERASPEED
CONSULTING
GROUP**

Facts

- No specification REQUIREMENT that individual or combined I-V tables be monotonic
- No stated method to sum mismatched voltage points (piecewise linear interpolation is allowed and used)
- Specification recommends individual I-V table parser checking
- Combined checks added with BUG94 (BUG92 dealt with submodels): <http://www.eda.org/ibis/bugs/ibischk/>
- Non-monotonicity often occurs outside of normal simulation region – in clamping region and not a problem
- Ibischk5 parser is operating correctly

**TERASPEED
CONSULTING
GROUP**

Observations

- Non-monotonic behavior can occur
 - Combined I-V table slope is small
 - I-V table points are misaligned due to
 - Offset V intervals due to Gnd, Vdd and delta V
 - Different reference voltages (min/max)
 - Extraction with piecewise linear interpolation calculations (if not done right)
 - I-V tables have different V resolution
 - Combination of above cases

**TERASPEED

Example: x Step 2, Offset by 1

(Red: Interpolated Value)

x	y1 = x^2	y2 = x^2	y1-y2 = 0?
0	0		
1	2	1	1
2	4	5	-1
3	10	9	1
4	16	17	-1
5	26	25	1
6	36		

Non-monotonic due to piecewise linear interpolation on both columns

x Step 0.02, Offset by 0.01 (Red: Interpolated Value)

x	y1 = x^2	y2 = x^2	y1-y2
0.00	0.0000		
0.01	0.0002	0.0001	0.0001
0.02	0.0004	0.0005	-0.0001
0.03	0.0010	0.0009	0.0001
0.04	0.0016	0.0017	-0.0001
0.05	0.0026	0.0025	0.0001
0.06	0.0036		

**Still non-monotonic with
higher resolution data**

BUG I 40 Resolution

- Change WARNING to NOTE
 - Valid solution for user
 - Avoids tool and model developer support issues
- Add “based on piecewise linear interpolation” to message
- No practical fix
 - Still issues with higher resolution or choosing percentage threshold for non-monotonic warning
 - Piecewise linear interpolation is legal, and spline fitting would just hide information
